

ALEX MORGAN

Senior Software Engineer

San Francisco, CA • alex.morgan@email.com • +1 (555) 123-4567 • linkedin.com/in/alexmorgan • github.com/alexmorgan

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience designing, building, and scaling distributed software systems. Strong background in backend engineering, cloud architecture, APIs, databases, and technical leadership. Experienced in taking products from architecture and implementation through production operations, mentoring engineers, and partnering with product and cross-functional teams to deliver reliable, measurable outcomes.

TECHNICAL SKILLS

Languages	Python, Java, TypeScript, JavaScript, Go, SQL
Backend	REST, GraphQL, Microservices, Event-Driven Architecture, Distributed Systems
Cloud & DevOps	AWS, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions
Data	PostgreSQL, MySQL, Redis, Elasticsearch, Kafka
Engineering	System Design, Observability, Performance Optimization, Security, Testing

PROFESSIONAL EXPERIENCE

Senior Software Engineer | NovaCloud Technologies | 2022–Present

- Led architecture and development of high-throughput backend services supporting 10M+ monthly requests, improving p95 API latency by 38%.
- Designed event-driven workflows using Kafka and Kubernetes, reducing asynchronous processing failures by 45% and improving system resilience.
- Owned technical design reviews, production incident response, and engineering standards across a team of 7 engineers.
- Introduced automated CI/CD and infrastructure-as-code practices with GitHub Actions and Terraform, reducing deployment time from hours to under 20 minutes.
- Mentored 4 engineers through design reviews, pair programming, and career development; helped establish reusable engineering patterns.

Software Engineer | DataWorks Inc. | 2019–2022

- Built scalable REST and GraphQL services in Python and Java, serving millions of customer records across multiple product teams.
- Optimized PostgreSQL queries, caching, and service communication, reducing average request latency by 30%.
- Implemented automated testing and deployment pipelines that increased release frequency while reducing regression-related incidents.
- Collaborated with product, QA, and frontend teams to deliver customer-facing features from technical design through production rollout.

Software Engineer | Bright Systems | 2017–2019

- Developed backend APIs and internal tools using Java, Python, PostgreSQL, and Redis.
- Improved application reliability through structured logging, monitoring, automated tests, and systematic root-cause analysis.
- Participated in code reviews and contributed to architecture and development standards.

SELECTED PROJECTS

Distributed Job Processing Platform — Designed a fault-tolerant job processing platform using Kafka, Kubernetes, Redis, and PostgreSQL with retries, idempotency, and observability.

Cloud Cost Optimization — Automated resource analysis and scaling recommendations across AWS workloads, reducing non-production infrastructure costs by approximately 25%.

EDUCATION

B.S. in Computer Science | University of California, Berkeley | 2017

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | Certified Kubernetes Application Developer (CKAD)

LEADERSHIP & IMPACT

Technical mentorship • Architecture reviews • Engineering best practices • Cross-functional collaboration • Production ownership
